

3/4/2021

Background determination. Data has been compiled from multiple sources and cleaned for consistency between datasets. Data have been combined from raw source files with Python scripts. Quality control checks have been performed on these large and varied datasets, however, if there are any data issues, please contact gbrunkhorst@anchorqa.com with any questions.

Data Files

The suspended solids database compilation consists of 3 files:

Final_dataset_2021-02-27.xlsx includes the concentrations for the final anthropogenic background dataset. Total PCBs Congeners, Dioxin/Furan TEQ, Arsenic, 1,2,3,7,8-PeCDD, 2,3,4,7,8-PeCDF, 2,3,7,8-TCDD, and 2,3,7,8-TCDF. Additional details provided in the column descriptions to the right.

GreenSuspendedSedSummary_2021-01-28.xlsx includes the concentrations for Total PCBs Congeners, Total PCBs Aroclors, Dioxin/Furan TEQ, and Arsenic, along with sample information (e.g., Green River Flow designation at the time of sampling). Additional details provided in the column descriptions to the right.

GreenSuspendedSedAll_2021-01-28.xlsx includes the concentrations for Total PCBs Congeners, Total PCBs Aroclors, Dioxin/Furan TEQ, and Arsenic, and PCB and Dioxin/Furan congeners. Note that PCB congener nomenclature is based on the source database and is not globally consistent. Additional details provided in the column descriptions to the right.

Sample ID

Sampling method used

Chemical

Concentration. Total PCBs based on sum of detected congeners. For Dioxin/ furan TEQ, TEQ calculated based on the mammalian TEFs (Van den Berg et. al. 2006) using 1/2 the detection limit for NDs. Fines-normalized concentration for organics: Total PCBs Congeners, Dioxin/Furan TEQ, 1,2,3,7,8-PeCDD, 2,3,4,7,8-PeCDF, 2,3,7,8-TCDD, and 2,3,7,8-TCDF.

Concentration unit, dry weight base or fines-normalized.

Flag for detections. Total and TEQ would be non-detect ("No") if all summed constituents are ND (however, this does not occur in the dataset [at least one congener is always detected]).
